Executive Summary

We may think we know the demographics of the people where we live. But do we? What percentage of your neighbors don't speak English at home? How many Allen County residents lack a high school diploma? Where are Allen County's most-educated residents concentrated? Do rural areas differ from their urban counterparts in terms of income? This report, commissioned by the St. Joseph Community Health Foundation (SJCHF), will help you answer those questions and many more.

SJCHF responds to community needs, leverages collaboration and engages in transformational initiatives to serve vulnerable populations in Allen County. SJCHF is interested in place-based philanthropy but it can be difficult to know where to direct those funds if it doesn't have a full picture of Allen County's neighborhoods and communities. Information about languages, health insurance and food access are of particular interest to SJCHF and is included in this report.

"Allen County, IN Vulnerable Populations Study: A Review of Demographic, Socioeconomic and Poverty Indicators" looks at a variety of measures that helps to identify concentrations of vulnerable populations, using Allen County as the benchmark data. It has five sections:

- Demographic and population data, called General Indicators, compiled for Allen County and Allen County's ZCTAs with charts for each general indicator for Allen County and each ZCTA. General indicator tables sorted by either largest to smallest or when relevant from lowest to highest performing.
- 2. Additional data for ZCTAs with median household incomes below Allen County's, assembled both as indicator tables and geographies.
- 3. List of the census tracts with: 1) lowest household median incomes and 2) highest percentage of people living below federal poverty level.
- 4. Locations of Allen County's "food deserts" by census tract evaluating proximity to supermarkets and vehicle access for low-income census tracts.

All data here are from public sources. Demographic and population data comes from the U.S. Census Bureau's American Community Survey. Locations of limited food access come from the U.S. Department of Agriculture's Food Access Research Atlas.

With a report of more than 400 pages, there is no way to provide a comprehensive summary in a page or two, but there are some themes that did emerge:

- No single ZCTA best represents Allen County's data. The ZCTA that matched Allen County for each data point varied across measures, including urban and rural ZCTAs.
- ZCTAs with median income below Allen County's are concentrated in urban areas.
- Low-income households are correlated with higher levels of minority and non-English speaking populations when comparing ZCTAs.
- Average household income is higher than median household income in every ZCTA, indicating
 higher income households are pulling up the average as opposed to lower-income households
 bringing down the average.
- A strong relationship emerged between the concentration of bachelor's degrees and household incomes because areas of higher educational attainment experience higher household incomes;

- the relationship between those without high school diplomas and household income was less pronounced, especially when looking at rural ZCTAs.
- Allen County's black, Hispanic and Asian populations are concentrated in four ZCTAs (46803, 46806, 46807, 46816).
- Three ZCTAs are majority racial-ethnic minority (46803, 46806, 46816).
- One ZCTA (46803) has essentially half the population living below the federal poverty level.
- The relationship between size of families/households and rate of households below federal poverty level is evident by the difference among census tracts with the lowest median household incomes and tracts with the highest percentage of households living below the federal poverty level since only five overlap.
 - Note: A single-person household is below the poverty level with an annual income of less than \$12,140; a four-person household is below the poverty level with an annual income of less than \$25,100 in 2018.
- Both rural and urban locations have ZCTAs with above average household and family size.
- Rural areas with large concentrations of Amish populations have above-average proportions of adults without high school diplomas, larger family sizes and do not speak English at home.
- The youngest median age is almost half of the oldest median age, with rural ZCTAs toward top and at bottom for median age.
- About 10% of Allen County residents do not speak English at home, with four ZCTAs (46806, 46803, 46741, 46816) at twice that rate or more.
- Populations who speak Indo-European languages at home have the highest percentage who speak English very well.
- Populations who speak Spanish at home have about half who speak English very well.
- Populations who speak Asian/Pacific Islander or Other languages have the lowest percentage who speak English very well.
- The age segment with the largest percentage of uninsured Allen County residents is 25 to 34.
- Amish populations drive up the uninsured rates in rural Allen County.
- Urban ZCTAs with higher concentrations of racial and ethnic minorities have higher rates of the uninsured.
- Two ZCTAs (46803 and 46806) have more than 50% of renting households where gross rent consumes more than 35% of household income.
- Allen County has twice as many owner-occupied housing units as compared to renter-occupied housing units.
- Approximately 10% of Allen County's renter-occupied housing units have been built in 2000 or later
- Approximately 6.7% of Allen County's owner-occupied housing units have been built in 2000 or later.
- Owner-occupied housing units built before 1939 concentrated in 46807, 46805, 46808.
- Renter-occupied housing units built before 1939 concentrated in 46802, 46808, 46806.
- Just under half the households in 46802 are single-person households.
- Allen County's "food deserts" are primarily located in the urban core.

Introduction

"Allen County, IN Vulnerable Populations Study: A Review of Demographic, Socioeconomic and Poverty Indicators" looks at population, demographic and socioeconomic indicators in Allen County, Indiana, both at the county level and by what amounts to ZIP codes: the U.S. Census Bureau's ZIP Code Tabulation Areas (ZCTAs).

The St. Joseph Community Health Foundation (SJCHF) hired the Purdue University Fort Wayne Community Research Institute (CRI) at the end of 2017 to evaluate Allen County's ZCTAs so SJCHF could identify geographic concentrations of vulnerable populations for place-based philanthropy.

All of the data used in this report is publicly available; no proprietary data sources were used. The indicator data and census-tract data about income and poverty came from the 2016 5-year U.S. Census Bureau's American Community Survey (ACS). Most data are presented as it appears on ACS tables; the report notes where CRI recalculated the data. Limited-food access information comes from the U.S. Department of Agriculture's Food Access Research Atlas.

The ACS produces data from a sample of the population and thus includes some variation about the estimate. This variation is accounted for through the inclusion of margin of error (MOE). If this information is being used to make funding decisions, it is important to recognize that although ZCTAs have been sorted by highest to lowest or vice versa, many have overlapping margins of error, making them statistically equivalent. MOE has been included on most tables. See the "Margin of error" section for more information. As a result of large differences between the smallest and largest ZCTA by population sizes, percentages were used when available. Comparisons of raw numbers should be considered against population size for analyzing ZCTAs.

Allen County's data are considered the benchmark for this report. Each indicator table includes Allen County's number for comparison purposes. No single ZCTA consistently represents Allen County's data across indicators.

Complete data for ZCTAs with a majority of population outside Allen County are included in the ZCTA data but not in the Allen County data. For example, information for 46706 (Auburn) has totals that include both Allen County and DeKalb County residents, but only the people who live in Allen County with an Auburn mailing address are in the county-level data.

Ranking information is listed for the four best- and lowest-performing spots for some of the general indicators on the ZCTA summaries. Ranking information is listed for the two lowest-performing spots and some two highest-performing ZCTAs for additional indicators.

Informed readers needed

While some of these indicators like population and educational attainment are easy to understand, that is not the case throughout this report. Although none of the information is particularly complicated on the surface, it takes time to sort through the statistical universe to understand what the numbers, especially percentages, represent. For example, is the percentage a portion of the entire population or

^a The Census Bureau also releases one-year ACS data but only for geographies for more than 20,000 people. Since most of Allen County's ZCTAs have populations below 20,000, five-year data had to be used.

just a portion of the subset? Don't worry; information about the definitions, populations and methodologies is included with this report so no outside research is required.

CRI did not recalculate universes, although some were combined for health insurance. Instead, the Census Bureau-defined metrics were used. This can make the report more complicated to understand. If these tables are being used to make funding or programming decisions, it is important to spend time to understand what the numbers are truly saying.

People with questions about this document and the data contained within can contact CRI Director Rachel Blakeman at rachel.blakeman@pfw.edu or (260) 481-0274 or at cri@pfw.edu.

Margin of error

The following information regarding MOE for the purposes of computing results for the American Community Survey is taken directly from the U.S. Census Bureau.

A margin of error is the difference between an estimate and its upper or lower confidence bounds. Confidence bounds can be created by adding the margin of error to the estimate (for an upper bound) and subtracting the margin of error from the estimate (for a lower bound). All published margins of error for the ACS are based on a 90 percent confidence level.^b

MOEs provided by the Census Bureau are always in the same units as their respective estimates. For instance, a percent estimate with have a percent MOE and a median income estimate will have an MOE in dollars.^c

Some estimates have an MOE that is larger than the estimate itself. This occurs mainly in estimates for small geographies or small groups of people or households which have a small sample size.^d

Data users should exercise caution when using these estimates because they have questionable reliability. Large MOEs can also signal that the sample size for the estimate is small. There is not an ideal solution to dealing with large MOEs.^e

Estimates of zero have non-zero margins of errors. This is because the ACS is a survey. Households with rare characteristics may not be surveyed, but may still exist.^f

For this report some geographies and some indicators have small sample sizes or low response rates, thus they have larger MOEs.

ACS subject definitions

The definitions for most terms used in the 2016 American Community Survey 5 year estimates are found in the *American Community Survey and Puerto Rico Community Survey 2016 Subject Definitions*. Most of the following definitions, along with many others found throughout this report, are taken directly from the *American Community Survey and Puerto Rico Community Survey 2016 Subject Definitions*.

Civilian noninstitutionalized population

All U.S. civilians not residing in institutional group quarters facilities such as correctional institutions, juvenile facilities, skilled nursing facilities, and other long-term care living arrangements.^h

Disability status

In an attempt to capture a variety of characteristics that encompass the definition of disability, the ACS identifies serious difficulty with four basic areas of functioning – hearing, vision, cognition, and ambulation. These functional limitations are supplemented by questions about difficulties with selected activities from the Katz Activities of Daily Living (ADL) and Lawton Instrumental Activities of Daily Living (IADL) scales, namely difficulty bathing and dressing, and difficulty performing errands such as shopping. Overall, the ACS attempts to capture six aspects of disability, which can be used together to create an overall disability measure, or independently to identify populations with specific disability types.

Educational attainment

Educational attainment data are tabulated for people 18 years old and over. Respondents are classified according to the highest degree or the highest level of school completed. Schooling completed in foreign or ungraded school systems is recorded as the equivalent level of schooling in the regular American system.

Respondents who received a regular high school diploma and did not attend college were instructed to report "Regular high school diploma." Respondents who received the equivalent of a high school diploma (for example, passed the G.E.D.), and did not attend college, were instructed to report "GED or alternative credential."

"Some college" is in two categories: "Some college credit, but less than 1 year of college credit" and "1 or more years of college credit, no degree." The category "Associate's degree" included people whose highest degree is an associate's degree, which generally requires 2 years of college level work and is either in an occupational program that prepares them for a specific occupation, or an academic program primarily in the arts and sciences. The course work may or may not be transferable to a bachelor's degree.

Master's degrees include the traditional MA and MS degrees and field-specific degrees, such as MSW, MEd, MBA, MLS, and MEng. Instructions included in the respondent instruction guide for mailout/mailback respondents only provided the following examples of professional school degrees:

[§] U.S. Census Bureau American Community Survey, American Community Survey and Puerto Rico Community Survey 2016 Subject Definitions (2016), https://www2.census.gov/programs-

 $[\]underline{surveys/acs/tech_docs/subject_definitions/2016_ACSSubjectDefinitions.pdf.}$

h U.S. Census Bureau, "Civilian Noninstitutionalized Population," https://factfinder.census.gov/help/en/index.htm#glossary.htm.

¹ U.S. Census Bureau American Community Survey, *American Community*, 60.

medicine, dentistry, chiropractic, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law, and theology. The order in which degrees were listed suggested that doctorate degrees were "higher" than professional school degrees, which were "higher" than master's degrees. If more than one box was filled, the response was edited to the highest level or degree reported.

Employment status

The employment status data shown in ACS tabulations relate to people 16 years old and over.

Employed – This category includes all civilians 16 years old and over who either (1) were "at work," that is, those who did any work at all during the reference week as paid employees, worked in their own business or profession, worked on their own farm, or worked 15 hours or more as unpaid workers on a family farm or in a family business; or (2) were "with a job but not at work," that is, those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are people whose only activity consisted of work around the house or unpaid volunteer work for religious, charitable, and similar organizations; also excluded are all institutionalized people and people on active duty in the United States Armed Forces.

Unemployed – All civilians 16 years old and over are classified as unemployed if they (1) were neither "at work" nor "with a job but not at work" during the reference week, and (2) were actively looking for work during the last 4 weeks, and (3) were available to start a job. Also included as unemployed are civilians who did not work at all during the reference week, were waiting to be called back to a job from which they had been laid off, and were available for work except for temporary illness.

Civilian Labor Force – Consists of people classified as employed or unemployed.

Unemployment Rate – The unemployment rate represents the number of unemployed people as a percentage of the civilian labor force^k.

Family households

A family consists of a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householder's family in tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone — these are called nonfamily households. Families are classified by type as either a "married-couple family" or "other family" according to the sex of the householder and the presence of relatives. The data on family type are based on answers to questions on sex and relationship that were asked of all people.

^j Ibid., 62-63.

^k Ibid., 65-66.

Married-Couple Family – A family in which the householder and his or her spouse are listed as members of the same household.¹

Female householder, No husband present

A family with a female householder and no spouse of householder present.^m

Foreign-born population

The foreign-born population includes anyone who was not a U.S. citizen or a U.S. national at birth. This includes respondents who indicated they were a U.S. citizen by naturalization or not a U.S. citizen.

Full-time, year-round workers

All people 16 years old and over who usually worked 35 hours or more per week for 50 to 52 weeks in the past 12 months.°

Hispanic or Latino origin

The terms "Hispanic," "Latino," and "Spanish" are used interchangeably. Some respondents identify with all three terms while others may identify with only one of these three specific terms.

Origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person's parents or ancestors before their arrival in the United States. People who identify their origin as Hispanic, Latino, or Spanish may be of any race.

Household

A household includes all the people who occupy a housing unit. (People not living in households are classified as living in group quarters.). The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living arrangements.^q

Householder

One person in each household is designated as the householder. In most cases, this is the person or one of the people in whose name the home is owned, being bought, or rented and who is listed on line one of the survey questionnaire. If there is no such person in the household, any adult household member 15 years old and over could be designated as the householder.

Housing unit

A housing unit may be a house, an apartment, a mobile home, a group of rooms or a single room that is occupied (or, if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other individuals in the building and which have direct access from outside the building or through a common hall.⁵

^m Ibid., 79.

ⁿ Ibid., 70.

[°]lbid., 131.

^plbid., 74.

^q Ibid., 76.

^r Ibid., 77.

^s Ibid., 7.

Male householder, No wife present

A family with a male householder and no spouse of householder present.^t

Occupied housing unit

A housing unit is classified as occupied if it is the current place of residence of the person or group of people living in it at the time of interview, or if the occupants are only temporarily absent from the residence for two months or less, that is, away on vacation or a business trip. If all the people staying in the unit at the time of the interview are staying there for two months or less, the unit is considered to be temporarily occupied and classified as "vacant."

Own child

A never-married child under 18 years who is a son or daughter by birth, a stepchild, or an adopted child of the householder. V

Owner-occupied housing units

A housing unit is owner-occupied if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. The owner or co-owner must live in the unit and usually is Person 1 on the questionnaire. The unit is "Owned by you or someone in this household with a mortgage or loan" if it is being purchased with a mortgage or some other debt arrangement such as a deed of trust, trust deed, contract to purchase, land contract, or purchase agreement. The housing unit is also considered owned with a mortgage if there is a home equity line of credit on it. The unit also is considered owned with a mortgage if it is built on leased land and there is a mortgage on the unit. Mobile homes occupied by owners with installment loan balances also are included in this category."

Poverty status

The total number of people below the poverty level is the sum of people in families and the number of unrelated individuals with incomes in the last 12 months below the poverty threshold. If the total income of that person's family is less than the threshold appropriate for that family, then the person is considered "below the poverty level," together with every member of his or her family.^x

Reference week

The data on employment status and journey to work relate to the reference week, that is, the calendar week preceding the date on which the respondents completed their questionnaires or were interviewed. This week is not the same for all respondents since the interviewing was conducted over a 60-month period. The occurrence of holidays during the relative reference week could affect the data on actual hours worked during the reference week, but probably had no effect on overall measurement of employment status.^y

^t Ibid., 79.

^u Ibid., 7.

^v Ibid., 77.

w Ibid., 38.

^x Ibid., 107.

^y Ibid., 118.

Renter-occupied housing units

All occupied housing units which are not owner-occupied, whether they are rented or occupied without payment of rent, are classified as renter-occupied. "No rent paid" units are separately identified in the rent tabulations. Housing units on military bases also are classified in the "No rent paid" category. "Rented" includes units in continuing care, sometimes called life care arrangements. These arrangements usually involve a contract between one or more individuals and a health services provider guaranteeing the individual shelter, usually a house or apartment, and services, such as meals or transportation to shopping or recreation.²

Some other race

Includes all other responses not included in the "White," "Black or African American," "American Indian or Alaska Native," "Asian," and "Native Hawaiian or Other Pacific Islander" race categories described above. Respondents reporting entries such as multiracial, mixed, interracial, or a Hispanic, Latino, or Spanish group (for example, Mexican, Puerto Rican, Cuban, or Spanish) in response to the race question are included in this category.^{aa}

Two or more races

People may choose to provide two or more races either by checking two or more race response check boxes, by providing multiple responses, or by some combination of check boxes and other responses. The race response categories shown on the questionnaire are collapsed into the five minimum race groups identified by OMB, and the Census Bureau's "Some Other Race" category. For data product purposes, "Two or More Races" refers to combinations of two or more of the following race categories:

- 1. White
- 2. Black or African American
- 3. American Indian or Alaska Native
- 4. Asian
- 5. Native Hawaiian or Other Pacific Islander
- 6. Some Other Race

There are 57 possible combinations involving the race categories shown above. Thus, according to this approach, a response of "White" and "Asian" was tallied as Two or More Races, while a response of "Japanese" and "Chinese" was not because "Japanese" and "Chinese" are both Asian responses. bb

Year structure built

Year structure built refers to when the building was first constructed, not when it was remodeled, added to, or converted. Housing units under construction are included as vacant housing if they meet the housing unit definition, that is, all exterior windows, doors, and final usable floors are in place. For mobile homes, houseboats, RVs, etc., the manufacturer's model year was assumed to be the year built.cc

ZIP Code Tabulation Areas (ZCTAs)

The Census Bureau first examined all of the addresses within each census block to define the list of ZIP Codes by block. Next, the most frequently occurring ZIP Code within each block was assigned to the entire census block as a preliminary ZCTA code. After all of the census blocks with addresses were assigned a preliminary ZCTA code, blocks were aggregated by code to create larger areas.

The Census Bureau assigned blocks that contained addresses, but did not have a single most frequently occurring ZIP Code to the ZCTA with which the blocks had the longest shared boundary.

In creating ZCTAs, the Census Bureau took the most frequently occurring ZIP Code in an area for the ZCTA code. Some addresses will end up with a ZCTA code different from their ZIP Code.^{dd}

The Census Bureau's ZIP Code Tabulation Areas (ZCTAs) Delineation Animation is an informative visual guide to the process of ZCTA delineation.^{ee}

Universe, estimates, and MOE notes

The following notes apply to estimates, MOEs, and universes for indicators found in tables throughout this report.

Note: * The estimate is controlled. A statistical test for sampling variability is not appropriate.

Note: ** Either no sample observations or too few sample observations were available to compute an estimate.

Note: *** Either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

Note: **** Percent computed by CRI and are not released by the Census Bureau.

Note: ***** MOE computed by CRI using the Census Bureau's methodology for estimating MOEs for aggregated indicators.

Note: "N" Data for this geographic area cannot be displayed because the number of sample cases is too small.

Note: ¹Universe is total population

Note: ² Universe is total civilian noninstitutionalized population

Note: ³ Universe is total households

Note: 4 Universe is total families

Note: 5 Universe is population for whom poverty status is determined

Note: ⁶ Universe is population 25 years and over

Note: ⁷ Universe is occupied housing units

Note: 8 Universe is foreign-born population, excluding population born at sea

Note: ⁹ Universe is population 5 years and over

Note: ¹⁰ Universe is total civilian noninstitutionalized population that share the characteristic in question

Note: 11 Universe is civilian noninstitutionalized population 25 years and over

Note: ¹² Universe is civilian noninstitutionalized population 25 years and over that share the characteristic in question

General Indicators for Allen County and ZCTAs

Americans tend to live with others like ourselves, whether it be by income, race, educational attainment or other demographic measures. While there are certainly outliers in each ZCTA, these indicators provide a snapshot in time – 2012 through 2016 – for each ZCTA including Allen County residents except for Arcola.^{ff}

This section has a list of all general indicators for each geography. Tables for each general indicator is in the General Indicators by Individual Measures.

^{ff} Arcola was excluded from this analysis because of the small sample size – fewer than 50 residents – who all receive mail at a post office box at the Arcola post office.

Allen County

- Indiana's third most-populated county containing Indiana's second-largest city (Fort Wayne) by population
- Indiana's largest county by square miles

46802 Fort Wayne

- Located in central Fort Wayne, including downtown and West Central (entire area located in city of Fort Wayne)
- Below Allen County's median income
- Third lowest median and average household incomes, although within margin of error for second or fourth lowest spots
- Largest difference between population and civilian noninstitutionalized population (734)
- Second smallest average household size, although within margin of error for bottom four spots
- Third youngest median age, although within margin of error for top four spots
- Third youngest median age, male, although within margin of error for second or fourth spots
- Second lowest median age, females, although within margin of error for top four spots
- Third largest percentage of residents below FPL, although within margin of error for second and third spots
- Fourth lowest percentage of adults with a high school diploma or equivalent, although within margin of error for bottom second, third and fourth places
- Fourth largest percentage of people speaking Spanish at home, with more than half of non-English speakers speaking English less than very well, although within margin of error for second, third or fourth spots
- Second largest percentage with a disability, although within margin of error for top four spots

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5 Year Estimates					

46803 Fort Wayne

- Located east of downtown including East Central neighborhood and Indiana Institute of Technology (entire area located in city of Fort Wayne)
- Below Allen County's median income
- Lowest median and average household incomes
- 33.5% difference between median and average household incomes
- Majority racial-ethnic minority
- Second smallest percentage of white non-Hispanic residents
- Highest percentage of black non-Hispanic residents but within margin of error with second place
- Second largest percentage of Asian, non-Hispanic residents but within margin of error for third or fourth place
- Second largest percentage of Hispanic residents, although within the margin of error for third and fourth place
- Second youngest median age, although within margin of error for top four spots
- Second youngest median age, male, although within margin of error for first and third spots
- Fourth lowest median age, females, although within margin of error for top four spots
- Largest percentage of residents below FPL
- Lowest percentage of adults with a high school diploma or equivalent, although within margin of error for bottom three spots
- Second lowest percentage of adults with a bachelor's degree or higher, although within margin of error for lowest two spots
- Third largest percentage of foreign-born population, although within margin of error for top four spots
- Second largest of percentage of people speaking language other than English at home, although within margin of error for top four spots
- Third largest of percentage of people speaking language other than English at home and speak English less than well, although within margin of error for top three spots
- Second largest percentage of people speaking Spanish at home, with almost half speaking
 English less than very well, although within margin of error for second, third or fourth spots
- Third largest percentage of people speaking Asian or Pacific Islander language at home, including almost all who speak English less than very well, although within margin of error for second, third or fourth spots
- Largest percentage with a disability, although within margin of error for top four spots

- Located in southeast Fort Wayne with small portion in unincorporated Allen County
- Below Allen County's median income
- Second lowest median and average household incomes
- 33.5% difference between median and average household incomes
- Majority racial-ethnic minority
- Smallest percentage of white non-Hispanic residents
- Second highest percentage of black non-Hispanic residents but within margin of error with first place
- Largest number of black non-Hispanic residents
- Largest number and percentage of Hispanic residents
- Third largest family size, although within margin of error for top four spots
- Youngest median age, although within margin of error for top four spots
- Youngest median age, male, although within margin of error for second youngest
- Second largest percentage of residents below FPL, although within margin of error for third spot
- Second lowest percentage of adults with a high school diploma or equivalent, although within margin of error for bottom four spots
- Lowest percentage of adults with a bachelor's degree or higher, although within margin of error for lowest two spots
- Fourth largest number of renter-occupied housing units, although within margin of error for second and third spots
- Largest percentage of foreign-born population, although within margin of error for top three spots
- Largest of percentage of people speaking language other than English at home, although within margin of error for top two spots
- Largest of percentage of people speaking language other than English at home and speak
 English less than well, although within margin of error for top three spots
- Largest percentage of people speaking Spanish at home, with approximately half speaking English less than very well
- Fourth largest percentage of people speaking Asian or Pacific Islander language at home, including almost all who speak English less than very well, although within margin of error for second and third spots

Source: U.S. Census Bureau, 2012-2016 American Cor	mmunity Surve	y 5 Year Esti	mates	

- Located in southeast Fort Wayne and southeast Allen County with majority of geography in unincorporated Allen County
- Below Allen County's median income
- 41.1% difference between median and average household incomes
- Majority racial-ethnic minority
- Third smallest percentage of white, non-Hispanic residents
- Third highest percentage of black, non-Hispanic residents
- Second largest number of black, non-Hispanic residents
- Largest number and percentage of Asian, non-Hispanic residents
- Second largest percentage of two or more races, non-Hispanic residents, although within margin of error for many ZCTAS
- Fourth largest number of Hispanic residents, although within the margin of error for second and third place
- Fourth largest percentage of residents below FPL
- Fourth lowest percentage of adults with a bachelor's degree or higher, although within margin of error for third spot
- Second largest percentage of foreign-born population, although within margin of error for top four spots
- Tied with 46741 for third largest of percentage of people speaking language other than English at home, although within margin of error for second spot
- Second largest percentage of people speaking language other than English at home and who speak English less than well, although within margin of error for top three spots
- Largest percentage of people speaking Asian or Pacific Islander language at home, including about ¾ who speak English less than very well

- Located in north/northeast Fort Wayne with small portion in unincorporated Allen County
- Second most populated ZCTA, although within margin of error for third and fourth spots
- Second most number of households, although within margin of error of third place
- Second largest number of Asian, non-Hispanic residents
- Third largest number Hispanic residents, although within margin of error for second and fourth spot
- Most closely matches Allen County's percentage of Hispanic persons
- Fourth smallest average household size, although within margin of error for bottom four spots
- Second smallest average family size, although within margin of error for bottom four spots
- Closest to Allen County's median age
- Closest to Allen County's median age, male
- Fourth largest number of owner-occupied housing units, although within margin of error for third spot
- Largest number of renter-occupied housing units, although within margin of error for top three spots
- Fourth largest percentage of foreign-born population, although within margin of error for second and third spots
- Second largest percentage of people speaking Asian or Pacific Islander language at home, including about half who speak English less than very well, although within margin of error for third or fourth spots

Jource. O.J. Census Bureau, 2012-2010 American Community Survey 5 Tear Estimates					

- Located in northeast Fort Wayne and northeast Allen County (geographically split between city of Fort Wayne and unincorporated Allen County)
- Most populated ZCTA
- Most number of households
- Third largest number of Asian, non-Hispanic residents, although within margin of error for fourth spot
- Largest number of two or more races, non-Hispanic residents, although within margin of error for the top four spots
- Largest number of owner-occupied housing units
- Third largest number of renter-occupied housing units, although within margin of error for top four spots
- Most closely matches Allen County's percentage who speak Asian or Pacific Islander languages at home

46743 Harlan

- Located in northeast Allen County (no incorporated town)
- Third least populated ZCTA, although within margin of error of second least populated
- Second smallest number of households, although within margin of error of smallest and third smallest
- Largest percentage of White, non-Hispanic residents, although within margin of error for second and third place
- Largest household size, although within margin of error for top four spots
- Largest family size, although within margin of error for top four spots
- Lowest median age, females, although within margin of error for top four spots
- Third lowest percentage of adults with a high school diploma or equivalent, although within margin of error for bottom four spots

46798 Yoder

- Located in southwest Allen County (no incorporated town)
- Smallest population by ZCTA, although within margin of error for second smallest
- Smallest number of households although within the margin of error for second and third place
- Oldest median age, although within margin of error of the bottom four spots
- Second oldest median age, males, although within margin of error of the bottom four spots
- Oldest median age, females, although within margin of error of the bottom two spots
- Fourth largest percentage with a disability, although within margin of error for top four spots

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5 Year Estimates

- Universe is the population for whom poverty status is determined
- The total number of people below the poverty level is the sum of people in families and the number of unrelated individuals with incomes in the last 12 months below the poverty threshold. If the total income of that person's family is less than the threshold appropriate for that family, then the person is considered "below the poverty level," together with every member of his or her family. XXXXVII
- 8 of 10 ZCTAs with median household income below Allen County's have rates above Allen County's percentage of residents living below FPL

XXXVII U.S. Census Bureau American Community Survey, American Community, 107.

American Community Survey 5 Year Estimates

- Universe is the population 25 years and over (includes adults who continued with education beyond high school)
- Mix of urban and rural ZCTAs with percentages below Allen County
- 8 of 10 ZCTAs with median household income below Allen County's have rates below Allen County's percentage of adults without a high school diploma
- Amish population of Harlan, Grabill, and Spencerville likely account for relatively low percent of residents having completed at least a high school diploma or equivalent

Percent of adults with a bachelor's degree or higher

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5 Year Estimates

- Universe is occupied housing units
- Allen County has twice as many owneroccupied housing units as renteroccupied units
- Because this measure is a raw number, not percentage, the sorting is heavily influenced by the size of total universe
- Approximately 20% of Allen County's renter-occupied housing units in two ZCTAs (46825 and 46805)
- Two ZCTAs (46802 and 46803) have more renter-occupied housing units than owner-occupied housing units

Source: U.S. Census Bureau, 2012-2016				

- Universe is the total civilian noninstitutionalized population, 65 years and over
- Medicare largely eliminates the uninsured population for ages 65 and older
- Majority of ZCTAs have an estimate of 0% uninsured
- Allen County and 46806 approach zero but are the only geographies that remain above zero taking into account MOE.
- 46806 is most likely to have uninsured individuals 65 years and over.

- Universe is the total civilian noninstitutionalized population, 65 to 74 years
- This table tells a similar story as the table for the uninsured population, 65 years and over. The MOEs for all ZCTAs except for 46806 make it statistically uncertain if any individuals between 65 and 74 years are uninsured. Allen County likely has some uninsured individuals in this cohort, and they likely live in 46806.

Uninsured, 75 years and over

- Universe is the civilian noninstitutionalized population for whom poverty status is determined with income at or above 400 percent of the poverty threshold
- 5 of 10 ZCTAs with median household income below Allen County's have rates above Allen County's percentage of the uninsured population with income at or above 400 percent of the poverty threshold

Types of health insurance coverage by age

CRI calculated estimates for the age cohort of 18 to 64 years in the *Types of Health Insurance Coverage* by Age table were made by summing the estimates for like indicators (e.g., Employer-based health insurance only, Medicare coverage only, VA Health Care only, etc.) in the age cohorts of 18 to 34 years and 35 to 64 years. This is the methodology recommended by the Census Bureau. XLVI

MOEs for the age cohort of 18 to 64 years in the *Types of Health Insurance Coverage by Age* table were calculated by CRI using the Census Bureau's recommended methodology for approximating MOEs for aggregated indicators. This involves squaring the MOEs from each indicator that comprises the aggregated indicator, summing the squares, and then taking the square root of the sum of squares. XLVIII

XLVI Berkley, "Using American," 49.

XLVII Berkley, "Using American," 49-51.

Additional Indicators for Allen County and ZCTAs with median household income less than Allen County

To provide additional data, information and context for the 10 ZCTAs that underperform Allen County in relation to median household income, this report provides a second set of indicators to help better understand and identify specific vulnerable populations in these locations. Not all ZCTAs underperform Allen County in all metrics. In other words, sometimes these locations actually do better than Allen County as a whole. Each indicator includes Allen County's number for comparison.

The ZCTAs included in this section are:

- 46802 (Fort Wayne)
- 46803 (Fort Wayne)
- 46805 (Fort Wayne)
- 46806 (Fort Wayne)
- 46807 (Fort Wayne)
- 46808 (Fort Wayne)
- 46809 (Fort Wayne)
- 46816 (Fort Wayne)
- 46819 (Fort Wayne)
- 46733 (Decatur)

As a reminder, the Decatur data includes the full ZCTA, not just the population living in Allen County.

Please note that data in columns labeled "CRI estimate" in the following tables are estimates calculated by CRI from ACS data.

Allen County

Selected monthly owner costs as a percentage of household income (SMOCAPI)

The information on selected monthly owner costs as a percentage of household income is the computed ratio of selected monthly owner costs to monthly household income. The ratio was computed separately for each unit and rounded to the nearest whole percentage. The data are tabulated only for owner-occupied units. Separate distributions are shown for units "with a mortgage" and for units "not mortgaged."

Selected monthly owner costs as a percentage of household income provide information on the monthly housing cost expenses for owners. The information offers an excellent measure of housing affordability and excessive shelter costs. The data also serve to aid in the development of housing programs to meet the needs of people at different economic levels.XLVIII

All tables are sorted in descending order. It is preferable for monthly housing costs as a percentage of household income to be low rather than high.

- Universe is housing units without a mortgage where SMOCAPI can be computed
- Spending more than 30% of income on housing can make households financial vulnerable because of the share of monthly income consumed by these fixed costs

Gross rent as a percentage of household income (GRAPI)

Gross rent as a percentage of household income is a computed ratio of monthly gross rent to monthly household income (total household income divided by 12). The ratio is computed separately for each unit and is rounded to the nearest tenth.

Gross rent as a percentage of household income provides information on the monthly housing cost expenses for renters. The information offers an excellent measure of housing affordability and excessive shelter costs. The data also serve to aid in the development of housing programs to meet the needs of people at different economic levels and to provide assistance to agencies in determining policies on fair rent. Allen County census tracts with lowest median household income^{LI}

These tracts are located in Fort Wayne's urban core. Allen County's median household income is 2.7 times higher than in census tract 17. In census tract 116.09, it is 6.5 times higher than in census tract 17.

Allen County census tracts with highest percentage of residents living below the poverty level^{LII}

Like lowest household median income, the tracts with the highest percentage of residents living below the poverty level are in Fort Wayne's urban core. In 40 of Allen County's 94 census tracts, less than 10 percent of residents live below the poverty level. LIII

LII CRI excluded census tract 9800.02 from consideration because of small population size (fewer than 50 residents)

 $^{^{\}mbox{\scriptsize LIII}}$ See Poverty status in the ACS subject definitions

Food Deserts in Allen County by census tract

Information regarding U.S. Department of Agriculture (USDA) Economic Research Service (ERS) food desert definitions and delineations is taken directly from the USDA ERS Food Access Research Atlas website. LIV

Consumer choices about food spending and diet are likely to be influenced by the accessibility and affordability of food retailers—travel time to shopping, availability of healthy foods, and food prices. Some people and places, especially those with low income, may face greater barriers in accessing healthy and affordable food retailers, which may negatively affect diet and food security.^{LV}

The USDA ERS Food Access Research Atlas identifies census tracts that are both low income (LI) and low access (LA), as measured by different distance demarcations. This tool provides researchers and other users multiple ways to understand the characteristics that can contribute to food deserts, including income level, distance to supermarkets, and vehicle access.^{LVI}

Low-income (LI) census tracts

The criteria for identifying a census tract as LI are from the U.S. Department of Treasury's New Markets Tax Credit (NMTC) program. This program defines a low-income census tract as any tract where:

- The tract's poverty rate is 20 percent or greater; or
- The tract's median family income is less than or equal to 80 percent of the state-wide median family income; or
- The tract is in a metropolitan area and has a median family income less than or equal to 80 percent of the metropolitan area's median family income (\$48,700).^{LVII}

Low-income (LI) and low-access (LA) at ½ and 10 miles

LI census tracts where a significant number (at least 500 people) or share (at least 33 percent) of the population is greater than ½ mile from the nearest supermarket, supercenter, or large grocery store for an urban area or greater than 10 miles for a rural area. LVIII

Low-income (LI) and low-access (LA) tract using vehicle access

A LI tract in which at least one of the following is true: at least 100 households are located more than ½ mile from the nearest supermarket and have no vehicle access; or at least 500 people, or 33 percent of the population, live more than 20 miles from the nearest supermarket, regardless of vehicle availability. LIX

LIX Ibid.

Estimates for population come from the 2010 Decennial Census. The 2010 Census is used for population data because ACS data for this indicator is less precise at the census tract level. Estimates for family income and household vehicle availability come from the 2010-2014 ACS 5 year estimates. Family income is measured in 2014 inflation-adjusted dollars. To determine whether a census tract in Allen County is LI, the median family income of the census tract is compared with the value that represents 80 percent of the median family income for the Fort Wayne metropolitan area (Allen, Wells, and Whitley counties). A census tract in Allen County is considered LI for the purposes of the Food Access Research Atlas if the median family income for the census tract was below \$48,700.

ERS researchers use supermarkets, supercenters, and large grocery stores as proxies for the complete set of stores that sell a wide variety of healthy foods at affordable prices. Information on the location of supermarkets, supercenters, and large grocery stores is obtained from two directories: 1) stores authorized to accept SNAP (Supplemental Nutrition Assistance Program) benefits and 2) stores in TDLinx, a Nielsen directory. The TDLinx store list is an annual snapshot of stores that are open on June 15 of each year. The directory of SNAP-authorized stores comes from the Store Tracking and Redemption System (STARS) maintained by USDA's Food and Nutrition Service. Stores that were in the system as of June 15, 2015, are included in the Food Access Research Atlas. ERS does not publish a list of stores included on the map.

ERS excludes military commissaries and warehouse club stores such as Sam's Club, Costco, and BJ's. While many such stores offer a wide variety of foods and accept SNAP benefits, military commissaries are only accessible to a select group of individuals, and club stores are only available to those who pay an annual membership fee. Drug stores, dollar stores, and convenience stores were also, again, excluded. Even though some of these store types may sell a variety of healthy foods, they vary widely in the extent of offerings. Excluding these types of food retailers from this store directory is likely to result in an overestimate of the number of people who lack access to nutritious food.

STARS superstores/supercenters are very large supermarkets, "big box" stores, superstores, and food warehouses primarily engaged in retail sale of a wide variety of grocery and other store merchandise. STARS supermarkets are establishments commonly known as supermarkets, food stores, grocery stores and food warehouses primarily engaged in retail sale of an extensive variety of grocery and other store merchandise, with 10 or more checkout lanes with registers, barcode scanners, and conveyor belts. A STARS large grocery store carries a wide selection of the four staple food categories. About 350 STARS stores were not classified as any of these three categories, but upon matching to TDLinx and further inspection through Google Maps and store websites, appeared to be full-service grocery stores with all major grocery departments and weekly sales fliers. TDLinx uses more expansive and different store classifications than STARS. TDLinx stores include those in the following subcategories: Grocery –

LX U.S. Department of Agriculture Economic Research Service, "About the Atlas," last modified October 18, 2017, https://www.ers.usda.gov/data-products/food-access-research-atlas/about-the-atlas/.

Conventional; Grocery – Limited Selection; Grocery – Supercenter; Grocery – Natural/Gourmet; Grocery – Warehouse and Mass Merchandisers such as Target, Big Kmart, etc. LXI

While supercenters and supermarkets are obvious store formats in the Fort Wayne market, a definition of a large grocery store is helpful to better understand what local stores were factored into the map. In contrast, small and medium groceries are excluded from consideration. A large grocery store must carry a "wide" selection of the four staple food categories (fruits and vegetables; dairy products; meat, poultry or fish; and breads or cereal) and have at least \$2 million in annual sales. LXIII A medium grocery store carries a moderate selection for the four staple categories, and a small grocery carries a small selection of the staples. Based on the map and the listed definition, CRI can surmise that George's International Grocery, 2021 Broadway, is a large grocery and included for consideration but Asian markets and other neighborhood groceries like Pio Market, 1225 E. State Blvd., are small or medium groceries and not listed on the USDA's food access map.

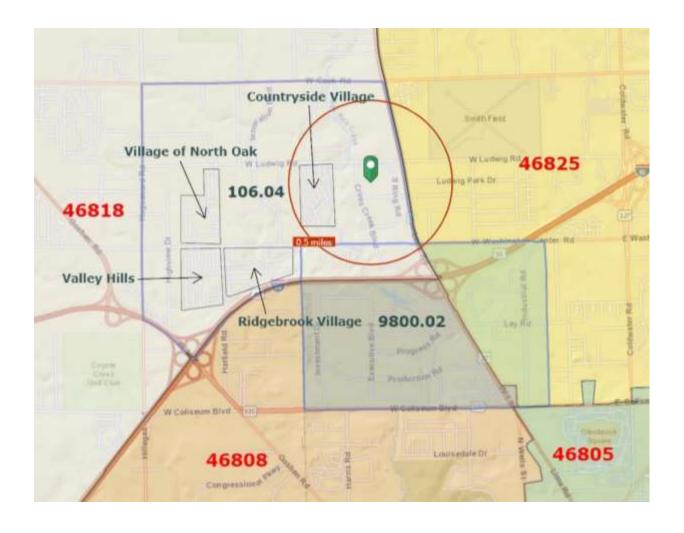

Food deserts with supermarkets

Interestingly a census tract that has a supermarket, supercenter, or large grocery store within its borders can be a food desert.

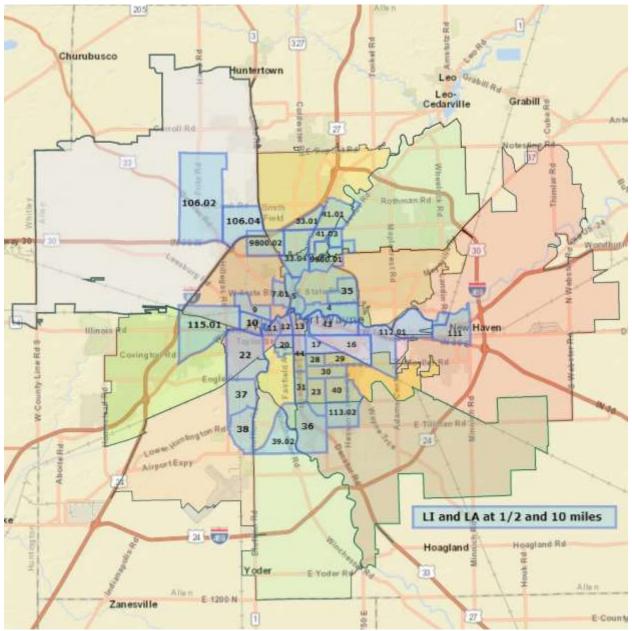

For example, census tract 106.04, bounded by West Cook Road on the north, Lima Road on the east, I-69 and U.S. 30 on the south, and Huguenard Road on the west, is considered a food desert by the LI and LA at ½ and 10 miles metric. This may be confusing because the Meijer at 6309 Lima Road is located within this census tract. The measure of low access in an urban area used in this report is whether at least 500 residents or at least 33 percent of residents live more than ½ mile from the nearest supermarket. The Countryside Village mobile home park is within the ½ mile radius centered on 6309 Lima Road. Yet three mobile home parks in this census tract are outside of the ½ mile radius centered on 6309 Lima Road: Village of North Oak, Valley Hills, and Ridgebrook Village. The following map illustrates the proximity of Meijer to the population centers within that tract.
